EDUCATION

Fordham University

Bachelor of Science in Computer Science

May 2023

Bronx, NY

EXPERIENCE

Thrive NextGen

Systems Engineer

Jul 2023 – Present

Mar 2026 – Present

- Handle escalated technical incidents across endpoint, infrastructure, identity, messaging, application, security, and connectivity environments supporting thousands of enterprise users across North America, Europe, Asia, and Australia.
- Administer Microsoft 365 and identity environments through Entra ID, Active Directory, Conditional Access, MFA, SSO, Exchange Online, and Google Workspace, resolving complex authentication and access issues.
- Troubleshoot Microsoft Azure infrastructure including virtual machines, Storage Accounts, and Private Endpoints, alongside basic AWS EC2 server administration and VMware vCenter operations.
- Investigate account and messaging security incidents involving compromised accounts, suspicious sign-ins, phishing, spoofing, quarantines, authentication failures, and access-policy violations, coordinating with security teams when appropriate.
- Diagnose complex connectivity issues involving DNS, DHCP, routing, remote access, and enterprise VPN solutions including Fortinet, Perimeter 81, Ivanti, and Viscosity.
- Resolve organization-wide email security and mail-flow issues involving Microsoft Defender, Mimecast, Avanan, transport behavior, and email authentication technologies including DMARC, DKIM, and SPF.
- Perform root cause analysis for high-impact incidents and collaborate with networking, security, infrastructure, and application teams to restore business-critical services.

Technical Support Engineer

Sep 2025 – Mar 2026

- Provided intermediate enterprise support for Microsoft 365, Windows, Active Directory, Entra ID, VPN, VDI, Citrix, printers, mobile devices, and onboarding/offboarding workflows across diverse client environments.
- Supported Financial Services organizations, including traders and other business-critical user populations, resolving time-sensitive technical issues with strong attention to operational impact.
- Provided white-glove technical support to C-level executives and other high-priority users, maintaining clear communication and ownership throughout critical incidents.
- Installed and supported specialized financial applications including Bloomberg Terminal and associated Microsoft Office integrations.
- Troubleshot networking, collaboration, and infrastructure issues involving DNS resolution, SharePoint permissions, external access, terminal servers, ISP connectivity, QuickBooks, and enterprise application access.
- Supported Intune and AirWatch endpoint management, application deployments, mobile-device issues, and Apple Push Notification certificate renewals.
- Created internal technical documentation and training material covering VPN troubleshooting, RDP, VDI, Azure Virtual Desktop, Kaseya administration, and PowerShell workflows for lower-level engineers.

Associate Support Engineer

Jul 2023 – Sep 2025

- Provided first-line remote support through phone, email, and chat, accurately documenting, updating, triaging, and resolving incidents through ServiceNow.
- Troubleshot end-user issues involving Microsoft 365, Windows, VPN connectivity, remote sessions, VDI access, Citrix, printers, peripherals, and business applications.
- Administered user access across Active Directory, Entra ID, and hybrid environments, including account provisioning, password resets, access permissions, MFA re-registration, and onboarding/offboarding.
- Installed and supported enterprise applications, endpoint hardware, peripherals, and network printers, including Citrix-based printing workflows involving EPIC and Agility.
- Provided email security support by investigating phishing and spoofing reports, managing quarantined messages, and permitting or blocking senders through Microsoft Defender, Mimecast, and Avanan.

PROJECTS

On-Premise LLM Inference Server | *Linux, WSL, Docker, Python, REST APIs, Ollama, Git*

March 2026

- Designed and deployed a self-hosted AI inference environment using WSL, Docker, and Ollama, providing private, low-latency access to large language models across multiple devices.
- Configured container networking, ports, host bindings, and cross-device connectivity while troubleshooting communication between Windows, WSL, Docker containers, and remote clients.
- Implemented REST API endpoints for model interaction and response handling, enabling integration with custom Python applications and workflows.
- Administered the Linux-based environment through command-line tools while troubleshooting application services, networking, dependencies, and resource utilization.

Color-Track | *Python, OpenCV, Rospy, Linux, Git*

April 2023

- Built a real-time object tracking application in Python for a TurtleBot3 robot using OpenCV and Rospy, enabling autonomous tracking through continuous video stream processing.
- Implemented computer vision logic to detect and follow color-specific objects in dynamic environments and calculate angular and linear velocity adjustments based on target position.
- Developed and tested the robotics application within Linux-based development environments using ROS tooling and command-line workflows.

N-Queens Solver | *C++, Qt, Git*

October 2024

- Developed a C++ application to solve the N-Queens problem using an optimized backtracking algorithm across variable board sizes.
- Integrated a Qt-based visualization layer to display queen placements, backtracking steps, and final board states, improving interpretation and debugging of algorithm behavior.
- Improved search performance through pruning techniques that eliminated unnecessary recursive calls for larger problem sets.

TECHNICAL SKILLS

Systems & Cloud: Windows Administration, Linux Fundamentals, Microsoft Azure, Azure VMs, Azure Storage, Private Endpoints, AWS EC2, Microsoft 365, Exchange Online, VMware vCenter, Docker, WSL
Identity & Security: Active Directory, Entra ID, Group Policy, MFA, SSO, Conditional Access, Google Workspace, Microsoft Defender, Mimecast, Avanan, DMARC, DKIM, SPF
Networking & Endpoint: DNS, DHCP, VPN Troubleshooting, RDP, VDI, Citrix, Azure Virtual Desktop, Intune, AirWatch, SharePoint, Endpoint Support
Tools: PowerShell, ServiceNow, Kaseya, Bomgar, Devolutions, Git, GitHub, Hybrid Cloud Director
Programming: Python, Java, C++, C, JavaScript, SQL, REST APIs

CERTIFICATIONS

- CompTIA A+
- CompTIA Network+
- ITIL 4 Foundation
- Mimecast Lvl 1 Warrior
